

Tues

15/01/13

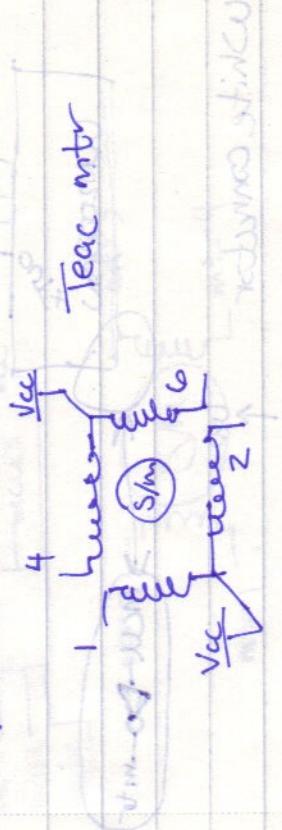

- Each open string will vibrate @ natural slant
- $f_{nat} \propto F_{tension} \propto \frac{1}{D}$

$$D = \frac{C \cdot \sqrt{F_{tension} (kg)}}{f (Hz) \cdot L (m)}$$

$C = 49 \text{ g/t}$
 $C = 34 \text{ m/t}$

Unipolar motor (stepper)

15/01/13

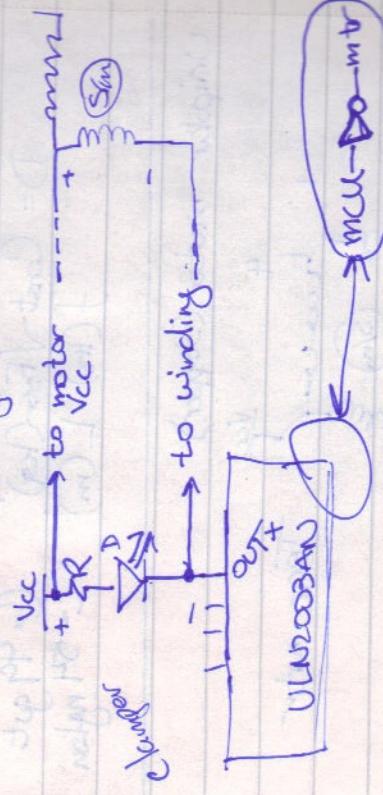

Bipolar stepper mtr

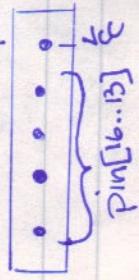

ULN2003AN motor driver act Board

- ↳ jumper if 5V mtr
- ↳ else use 12V and 15V

↳ common ground

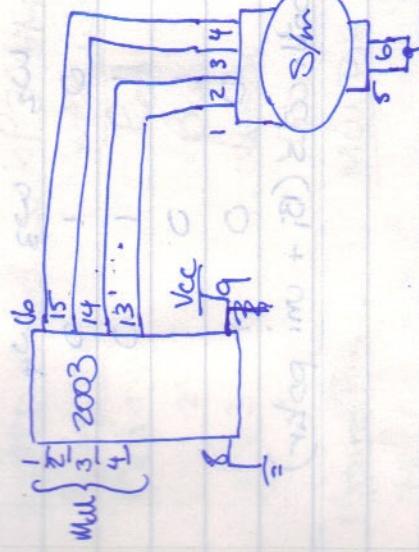

white connector

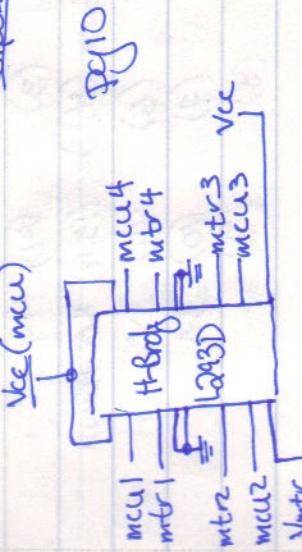

15/01/13

15/01/13

Unipolar act

Bipolar act

15/01/13

Step	ω_1	ω_2	ω_3	ω_4
1	-	0	-1	0
2	0	-1	0	-1
3	0	1	0	0
4	-1	0	0	1

* for both cases ($B_i + \text{uni}$)

Board Ptn ~~white~~ white wire color repeat

Oct 1 Red apple cal

2 Blue 3 White

4 Hello

Board Pk Mcu Pk Sicq snowdon

ORG. (no oxidising test) = B.C.A?

17/10/13

Stepper mtr

$$100 \text{ steps} = 360^\circ$$

↳ $3.6^\circ / \text{step}$

Arduino: stepper.h
`step()`

Micophone Board w/ Bandpass filter

GND → $\frac{1}{2}$
Vac +5V

$$\left. \begin{array}{l} \text{SOUT (expected frequency)} = 0V \\ \text{SOUT (no or incorrect freq)} = 3.6V \end{array} \right\}$$

FIN = frequency input to cct (filtered)

FOUT = outputs squarewave of expected frequency for calibration

Rout = ?

↳ multturn pot (10x) selects pass frequency

Pins 2 input for test cct.

17/01/13

Stepper mtr interface

3.6°/step
written on bottom board

IN1 → OUT1 → white

IN2 → OUT2 → yellow

IN3 → OUT3 → Red

IN4 → OUT4 → Blue

Board (Duemilanove) pins [8..11]

Servo mtr SG-90 (blue)

3V - 6.0V

Stall 5.2kg/cm

MG-995 (silver) = (long) wire

3.6V - 7.2V

9.0kg/cm

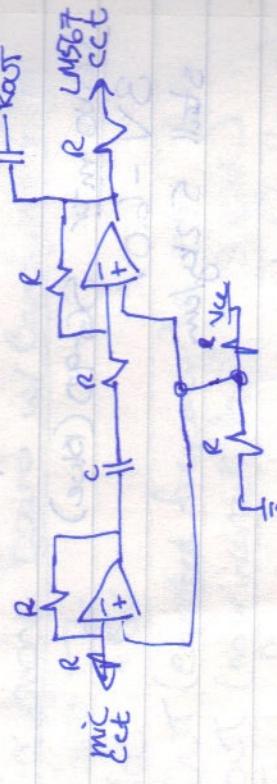

Basic library Servo.h
Digital.write(positive) 10-180°

18/01/13

Microphone Board w/ Bandpass Filter
Fout = calibration freq output
 F_{in} = test signal in put?
Rout = Amplified, unfiltered microphone input?

↳ Rout is on output of

[the 8] second amplifier

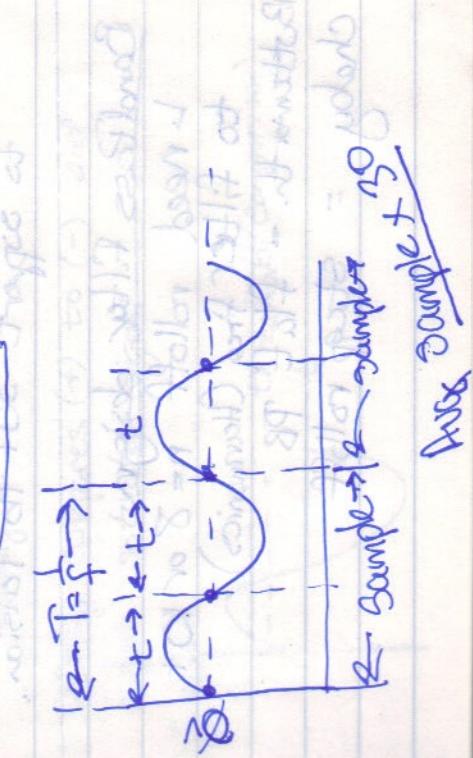

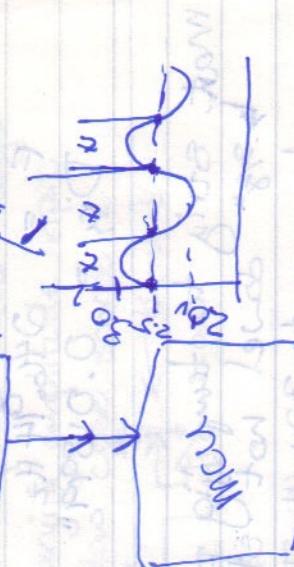

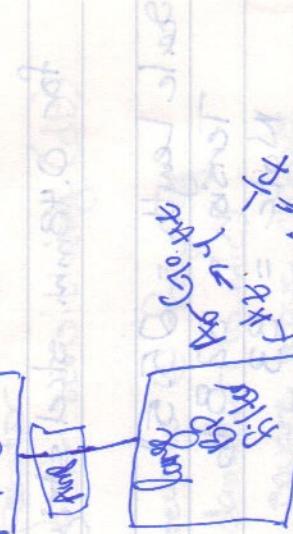

$$Out(Pin) = \pi L_1 \text{ or } 0 \rightarrow \text{no feedback}$$

can not be used as a guitar tuner actuator

Guitar input

18/01/13

EN101P!

Ans Sample + 30 seconds

19/01/13

Used calculator to find string tension
for temp jig @ wahiduddin.net/...

for 0.48mm steel string

$$\text{Scale Length} = 25.5"$$

$$\text{Tension} = 32.8 \text{ lb}$$

$$\text{Note} = B3$$

$$F = 246.94 \text{ Hz}$$

$$D_{\text{ia}} = 0.01899"$$

make string to temp 'jig plywood
→ 218" level hot stray enough
to support 30+ lb Tension.

BandPass Filter design

- ↳ need roll-off $n=8$ or $10+$ to filter freq (Harmonics)
- Bottom = flat PB
- Cheby = steep roll-off

Jan 24 2013

Design of (And) Microphone board

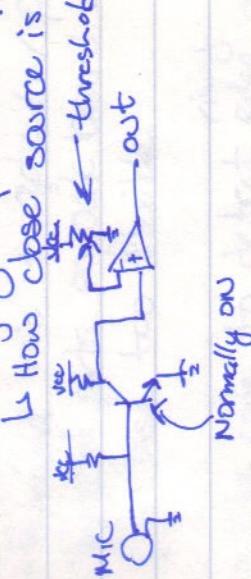

IN: 3-5V

OUT: Comparator

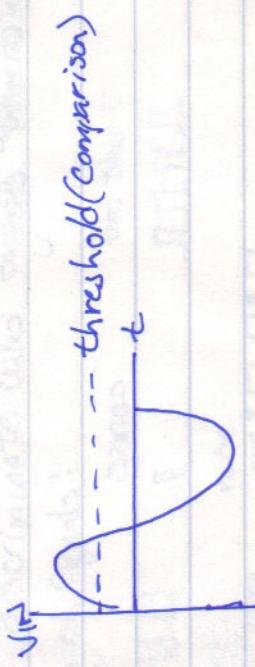

Port: Adjust for sensitivity (dB)

Outputs squarewave @ frequency
of input fundamental (to mic)

↳ duty of square wave changes
for varying amplitude input

OPAmp compares (+) to (-) and
outputs saturated signal

Jun 25 2013

Decided to remove microphone (de solder) and use pickup coil attached to mic board.

Micophone much too noisy to get signal without proper conditioning.
Pickup coil very clean signal!
Screenshots taken

Fant

Jun 27 2013

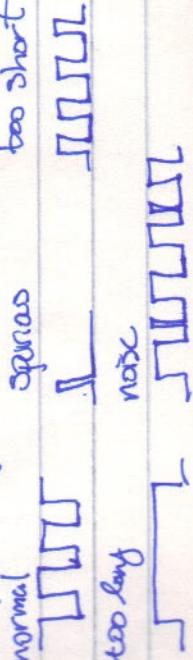

- Removed mic + replaced w/ Pickup
- Replaced parts on oak board as play base too flexible

write code to detect edge and rising

interrupt (Bruno)

write code to determine frequency and discriminate valid signals from noise

Expected signals:
